SPARK

Welcome to the Biogen Foundation Spark Video Contest!

We are inviting middle and high school students in Massachusetts and North Carolina to create 30-second to 3-minute videos on the topic of genetic mutations. Please make sure the video is accurate and creative, and have your teachers submit the video here (two submissions per school), because the first 200 eligible videos submitted will win \$500 for your school!

Up to 20 videos will move to the voting round. We will pick videos representing middle schools and high schools from Massachusetts and North Carolina. The producers of these selected videos will receive \$1,000 for their schools, and the videos will be featured in our voting round, where the general public will vote on their favorite videos during a one-month period.

Finally, Grand Prize winners will receive \$10,000 for their schools and three GoPro video cameras for the students who created and starred in the winning videos!

The goal of the Biogen Foundation is to provide access to science through hands-on science learning, teacher development opportunities, and college readiness and support. It is crucial to invest in science education to ensure we have the future innovators needed to tackle the challenging issues of tomorrow. Find out more about the Biogen Foundation [here](#).

Questions? Contact the Biogen Foundation [here](#).

Watch the video below for more information and inspiration. We can't wait to see what you create!

Submissions are open from September 12-December 8.
